

Why We Should Recycle

If everyone in the world recycled, we would have a much cleaner and healthier environment. Not recycling damages the air quality, wildlife, and land.

The environment is getting worse and worse; people are littering instead of recycling plastics. Most recycling is going in the wrong spots and people do not know which plastics go in the blue bin.

It may not seem like one person can make a difference, but one person actually can, by recycling.

Why is There a Fee at Recycling Depots?

- to pay employs
- supply containers and bins
- buy trucks to carry plastic

How to Properly Use Bins and Bags

In your blue bin

plastic containers, paper cups, foil, steel containers, paper cans, and frozen dessert boxes

In the Yellow Bag

paper packages, newspaper, flyers, and printed paper

In the Grey Bin

glass bottle and jars

Recycling 100% Of Your

Why we should care? What will happen if we don't care?

Do you want to have plastic in the fish you have for dinner? If we don't care about where and how we dispose of our plastic, the world could become a plastic waste land.

In one year, humans created over 10 million tons of plastic. If we continue this for 30 years, the whole world will be a landfill of plastic.
